PROFESSIONAL SUMMARY

Lead Product Manager with 5+ years at noon.com, the Middle East's largest e-commerce platform, driving fulfillment products across UAE, KSA, and Egypt. Progressed from APM to Lead PM in under 4 years, currently leading a 41-member cross-functional team with 5 direct PM reports. Track record of building scalable systems processing 1.7M+ daily inventory transactions and \$3.5M+ in monthly seller charges. Deep expertise in warehouse operations (inbound, outbound, transfers, returns, inventory, finance), platform architecture, and AI-powered product innovation. Technically hands-on with SQL/BigQuery, API integrations, and internal tooling.

PROFESSIONAL EXPERIENCE

noon.com — Middle East's largest e-commerce platform (UAE, KSA, Egypt)

Fulfilled by Noon (FBN) — Fulfillment Technology

Lead Product Manager | Feb 2025 – Present

Leading product strategy, roadmap, and team across FBN's full fulfillment stack. Managing 41 cross-functional members including 5 direct PM reports.

- **B2B Externalization & Marketplace Expansion:** Led product for FBN's warehouse externalization, building integration with Salla (KSA's leading e-commerce platform) enabling external sellers to use FBN warehouses alongside noon/namshi. Generating ~\$27K USD/month in new revenue, with infrastructure built to scale to Amazon/Shopify-level integrations.
- **Cross-Border ERP Integration:** Leading integration of FBN interfaces with Chinese ERPs to increase assortment for GMV targets, unlocking cross-border seller onboarding at scale.
- **AI-Powered CCTV Investigation:** Built interface integrating Hikvision API to fetch QC station footage directly, with AI matching shipped items against catalog for RCA. Reduced return investigation time from **2 days to 2 hours**.
- **Serialized Inventory for QC:** Built serialized return storage system enabling fraud tracking while eliminating barcode reprinting dependency, saving ~\$55K USD/year in manpower costs.
- **AI Image Validation on After Sale Returns:** Built configurable AI image validation system for returns, comparing physical item images against catalog details to prevent fraud and wrong returns. Prompt-driven infrastructure is scalable to any new fulfillment use case. Currently applied to high-value returns with **<3% false positive rate**, covering 5% of returned items with a clear roadmap to expand across the fulfillment operation.
- **AI Seller Chatbot for FBN Optimisation:** Built the first full-action AI chatbot in the seller portal to help sellers optimise their FBN inventory — reducing storage costs, replenishing fast-moving SKUs, and clearing slow-moving stock. Unlike the prior limited-use bot, this is a fully capable action-oriented assistant. Currently in testing, with estimated NPS uplift of **3–5 points**.
- **VMS Automation & Outlier Detection:** Built embedding model to match unscanned items against similar scanned items, reducing required scans by **30% per day**. Added statistical outlier detection to flag wrong VMS dimensions (reducing bad data in **20% of cases**) with embedding-based default dimensions as fallback for outlier items. Pilot in progress; estimated **50% manpower savings** and 20% increase in VMS coverage.
- **Batch Tracking for OTC Drugs:** Implemented batch tracking in inventory and inbound as per legal requirement to store OTC drugs in fulfillment warehouses, allowing noon to sell OTC items on the platform. **450K+ units** captured to date.

Product Manager 3 (Senior PM) | Oct 2023 – Feb 2025

- **Warehouse Transfer System:** Built warehouse-to-warehouse transfer system processing **2.4M units/month**, reducing manpower costs by **10%**. System became critical infrastructure for noon's Supermall (hyperlocal business) launches.
- **Stock Reconciliation & Seller Payouts:** Automated inventory shrinkage payout process, resolving a 5-year-old seller pain point. Reduced payout TAT from **2–3 years to monthly** cycles, with recovery mechanisms for found inventory. Improved NPS by **2 points**.
- **Fraud Prevention — Serialization:** Designed tamper-proof serialization flow capturing **1M+ serialized units** with **52K units/month** ongoing inbound. Reduced customer return fraud by 5%, saving ~\$200K USD/year.
- **Fulfillment Platform Architecture:** Led inventory and platform system unification enabling noon, noon Minutes, and Supermall to share a single fulfillment stack. System processes **1.7M daily transactions** across **3.2M units**, eliminating the need for each business to build its own inventory layer.

Product Manager 2 | Oct 2022 – Oct 2023

- **Volumetric Measurement System:** Built end-to-end volumetric capture flow achieving **98% coverage** across **5–7M SKUs**. Data became foundational for storage charging, warehouse space optimisation, and the launch of noon's hyperlocal business.

- **Seller Finance Infrastructure:** Designed and built storage and outbound fee charging system processing ~\$3.5M USD/month. Reduced manual charging effort by **80%** and recovered **20%** in previously lost revenue through accurate volumetric-based billing.
- **Namshi Acquisition Integration:** Led fulfillment stack integration for Namshi (acquired marketplace), migrating their entire fulfillment operation onto noon's FBN infrastructure. Critical deliverable for the acquisition.
- **Inbound App & Transfer Flow:** Rolled out new warehouse inbound processing app improving manpower efficiency by **30%** and reducing cost per unit by **20%**. Built ASN segregation system enabling sellers to ship mixed items to a single warehouse.

Associate Product Manager | Jun 2021 – Oct 2022

- **Seller Inventory Dashboard:** Built inventory visibility dashboard for sellers managing **7.9M+ units** in noon warehouses. Reduced seller support tickets by **50%** by replacing a fragmented, low-visibility interface with a scalable solution for sellers of all sizes.
- **Automated Seller Returns Flow:** Designed self-service return request system replacing manual coordination. Now processes ~900K units/month, reduced seller support load by **70%**, enabling reallocation of support staff to higher-value work.
- Supported senior PM on roadmapping, user interviews, and product discovery across the FBN product suite.

SKILLS & TOOLS

Product: Product Strategy & Roadmapping, PRDs & Specs, User Research & Discovery, Stakeholder Management, OKRs & KPIs, A/B Testing, Cross-Functional Leadership, Platform & Marketplace Product Development

Technical: SQL/BigQuery (GoogleSQL), Google Apps Script, REST API Integration, Data Analysis & Dashboarding, Jira, Confluence, Figma, Miro, Looker

AI & Automation: Claude (Anthropic), Claude Code, Gemini, Google NotebookLM, Prompt Engineering, AI-powered workflow automation, Internal bot development

Domain: E-Commerce Fulfillment (FBA/FBN model), Warehouse Operations (Inbound, Outbound, Transfers, Returns), Inventory Management, Seller Marketplace, Supply Chain, Finance/Billing Systems, Multi-market Operations (UAE, KSA, Egypt)

EDUCATION

New York University Abu Dhabi (NYUAD) | Abu Dhabi, UAE

Bachelor of Arts in Economics, Minor in Computer Science | GPA: 3.94/4.0 | Class of 2021

SIDE PROJECTS & COMMUNITY

- **TL;DR Studio (<https://www.youtube.com/@TLDRStudio>):** AI-generated video explainers of top product, strategy, and tech articles. Uses Claude and NotebookLM to transform long-form content into watchable summaries, crediting original authors.
- **Playground PM:** Internal PM community at FBN focused on AI adoption in day-to-day product work. Led "Let's Explore AI" sessions. Built automated SOP generator using Claude Code and AskFBN bot using Google Apps Script + Gemini to bridge knowledge gaps across the FBN team.
- **Hamro Katha (hamrokatha.com):** Subscription web platform delivering bilingual (English/Nepali) illustrated cultural stories to children of Nepali expat families. Built as a personal project inspired by my nephew — an Australian-born Nepali — to help young children of diaspora families stay connected to their language and traditions. Targets parents of 2–5 year olds across the Nepali diaspora (5M+ Nepalis abroad).
